PROTECT PATIENT PRIVACY AND DATA INTEGRITY

Fast, Secure Access to the Data You Need, When You Need It

Timely access to patient data is a critical part of your day, and vital when it comes to making informed care decisions. But hospitals need to ensure patient privacy, data integrity and compliance. That's why the Welch Allyn® Connex® family of vital signs devices feature secure access with Imprivata®.

PROTECT WHAT MATTERS

Extending badge access from desktops to your Connex devices can help you protect patient data while saving valuable time.

Streamline Clinical Workflows

Securely log into devices—without manually entering your username and password—so you can spend more time focused on patient care.**

Improve Data Integrity

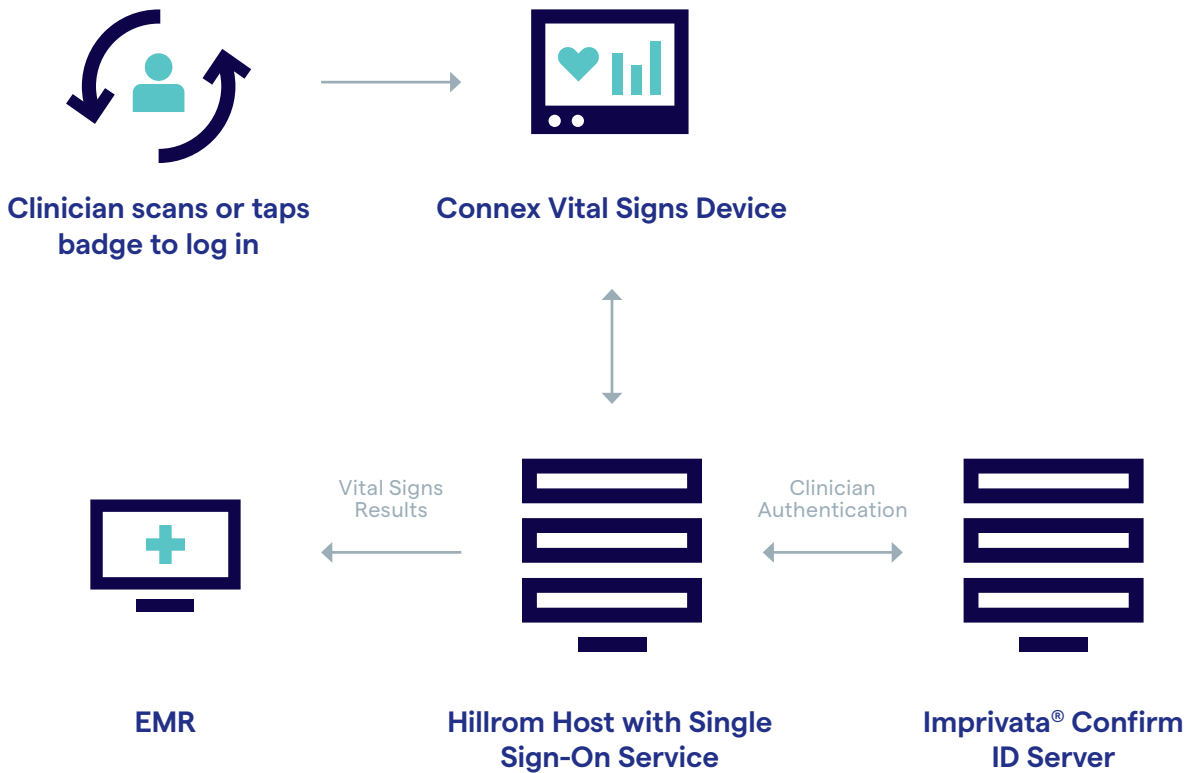

As hospital security measures increase, Hillrom's integration with Imprivata can provide fast, secure user authentication so you can manage patient data access and transactions.

Control Device Access

A simple badge scan or tap provides quick authentication at the bedside granting device access only to authorized users.

YOUR CLINICAL ID PATH WITH SINGLE SIGN-ON

The process is simple. Start by opening a session with Imprivata—either at the EMR workstation, on the vital signs monitor or elsewhere. This authentication is then extended to your Connex® vital signs device. Access is granted in a single step, allowing you to take patient vitals and send data to your EMR.
